

### **AMENDMENTS TO THE SPECIFICATION**

Due to the numerous typographical corrections made to the Specification, a Substitute Specification is submitted herewith, using the paragraph numbering found in U.S. Patent Application Publication 2002/0041688 (*i.e.* this application, as published).

The Substitute Specification is provided in two versions, *i.e.*, a marked-up version showing the changes made, and in a “clean” version. Both versions may be found as attachments to this Amendment.

The numerous changes to reference element numbering (elimination of multiple instances of “A” after a reference number) appear to be the result of an original word processing anomaly where the letter “A” was added after many reference element numbers.

With this Substitute Specification, the number of required drawing corrections have been reduced, as discussed, *infra*.

No new matter is involved with submission of this Substitute Specification
